

FAQ's About EddyAdmin

1. What's the difference between the Project Tables and the Master Tables?

The **Master Lookup Tables** provide a way for existing v4.x EddyVISION users to import their **EddyAdmin** tables into v5.x. Once imported, each **Master Lookup Table** can be imported into a **Project Lookup Table** if desired. When v4.x **EddyAdmin** tables are imported into v5.x, they are converted and stored in the *[install_path]\...\user\tables* directory.

On the other hand, the **Project Lookup Tables** are unique to each project and stored with each project. Editing one of the **Master Lookup Tables** will not reflect a change in the current project. The **Master Lookup Tables** are not automatically used in any project unless you import one or all of them while in the **Project Lookup Table** dialog. Review the **File** menu on the **Project Lookup Table** dialog for more insight.
