EddyVision 6.1 Release Notes
March 24, 2006

These release notes document all changes from Rev 6.0 to Rev 6.1. Many other features are planned for future releases of Rev 6.x.

1. Added back smoothing filter.
2. Added ability to print filter coefficients
3. Display OMNI-200 sample status flags in Balance Dialog.
4. Fixed TLIST file monitor.
5. Removed need for HASP key for acquisition with CoreStar testers.
6. Added ability to set AIR and TUBE thresholds in location bar using Shift+RB.
7. Added IR comp for RPC using OMNI-200.
8. Moved acquisition speeds to TEST OPTIONS dialog.
